

CigaretteBuster™ Hardwired System

The most popular non-smoking enforcement system in the world

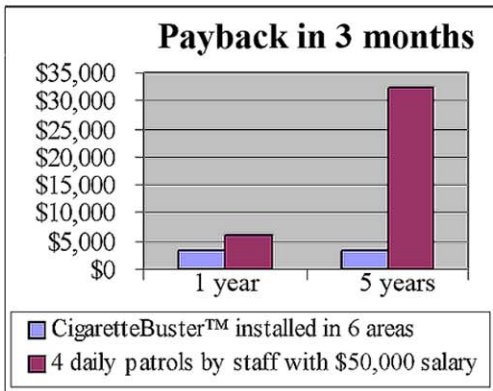

It's Successful!

Continuous and automatic monitoring eliminates smoking in bathrooms, stairwells, and other areas designated as non-smoking

It's Cost-Effective!

Pays for itself in a few months by freeing staff from routine bathroom patrol

It's Impartial!

Decreases complaints about non-smoking rules violations

It's Simple!

Easy to install and low maintenance

Praise for CigaretteBuster™

High school teacher Dick Austin observed immediate elimination of both smoking and the need for teachers to act as monitors and said "I can't praise it enough"

How the CigaretteBuster™ Hardwired System works:

Pair one detector (shown on left) with one receiver (shown on right). Run wires to connect them. Detector senses any illicit smoking in a room, and triggers flashing lights or horn outside the room. Staff can respond before smoker has left the area!

Proven results in high schools, colleges, hotels, airports, factories, and hospitals for over 10 years.

We also carry systems for local rules enforcement, short range wireless systems, and systems with pager notification. Call us to help you determine which approach best suits your site. **Stop non-smoking policy abuse**
